                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a method of identifying a mammal that will respond therapeutically to a method of treating cancer by administering an epidermal growth factor receptor (EGRR) modulator by comparing the level of a biomarker in a mammal before and after exposure to an EGRR modulator. The method comprises: (a) measuring, in the mammal, the level of a least one biomarker identified in the specification; (b) exposing the mammal to the EGRR modulator; and (c) measuring in the mammal the level of the biomarker, where a difference in the level in step (c) compared to step (a) indicates that the mammal will respond therapeutically to the method of treating cancer. The method and biomarkers are useful for identifying a mammal that will respond therapeutically to a method of treating cancer by administering an epidermial growth factor receptor (EGRR) modulator. This sequence corresponds to one of the biomarkers whose levels of gene expression is measured in the method of the invention.

This sequence encodes the human G protein-coupled receptor (GPCR) known as HG38. The HG38 protein and corresponding nucleic acid, may be used in the method of the invention for detecting colon or lung cancer. The first method involves performing an assay to determine the amount of HG38 in a sample of colon or lung tissue, and comparing the amount of protein to standard, thus detecting expression of protein in sample, where clifferential expression of protein in sample, where clifferential expression of protein in sample, where compared with the standard is diagnostic of colon or lung cancer. The second method involves hybridizing a composition compiler, to nucleic acids of a sample of colon or lung tissue under conditions to form at least one or its complement, and a labelling moiety, to nucleic acids of a sample of colon or lung tissue under conditions to form at least one comparing complex formation to a standard, where the comparison reflects differential expression of the polymclectide in the sample relative to the standard and is diagnostic of a colon or lung cancer. Detecting colon or lung cancer, by determining amount of protein in sample, comparing amount of protein to standard, and differential expression of protein in sample indicates colon or lung cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         2749 GTGGCATTTGTCCCATGTCTCTAA 2772

whose expression is upregulated or downregulated in specific cancers or other diseases such as angiogenic or fibrotic disorders, and to methods of determining the presence or absence of a pathological cell in a patient by detecting a nucleic acid at least 80% identical to those of the invention also relates to expression vectors and host cells comprising a nucleic acid of the invention. The invention, antibodies which specifically bind a polypeptide of the invention, use of such antibodies for drug targeting; onlypeptide of the invention, use of such antibodies for drug targeting; onlypeptides and methods are useful for diagnosing, prognosing and treating antibodies and methods are useful for diagnosing, prognosing and treating antibodies and other conditions such as psoriasis, ischaemia, heart disease, atherosclerosis, inflammatory diseases, autoimmune diseases, ratinal neovascularistation syndromes, scarring and utcrine fibroids. They may also be useful in wound healing and in contractine fibroids.

The invention relates to nucleic acids and proteins (ADN38683-ADN40064)
whose expression is upregulated or downregulated in specific cancers or
other diseases such as angiogenic or fibrotic disorders, and to methods
of determining the presence or absence of a pathological cell in a
conference or absence of a pathological cell in a
conference or absence of a pathological cell in a
conference or absence of a pathological cell in a
conference or a pathological comprising a
concer and of the invention; use of such antibodies for drug targeting;
conference and methods are useful for diagnosing, prognosing and treating
cancer and other conditions such as psoriasis, ischaemia, heart disease,
atherosclerosis, inflammatory diseases, autoimmune diseases, ratinal
neovascularistaion syndromes, scarring and uterine fibroids. They may
also be useful in wound healing and in contraception. The present
                                                                                          Determining the presence or absence of a pathological cell in a patient, useful for diagnosing, prognosing or treating cancer, comprises detecting a nucleic acid in a biological sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           GAGCCCGACGGCAGGATGTTGCTCAGGGTGGACTGCTCCGACCTGGGGGCTCTCGGAGCTG 180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This invention describes a novel human G-protein coupled glycoprotein hormone receptor, HG38. Glycoprotein hormone receptors are important in the endocrine system and HG38 may be involved in development and function of the skeletal muscle, spinal cord, placenta and to a lesser extent, the brain. The transgenic animal may be useful for studying tissue and brain. The transgenic animal may be useful for studying tissue and for studying the ability of a variety of the HG38 receptor, as well as for studying the ability of a variety of compounds to act as modulators of HG38 receptor activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          308

The invention relates to a combination comprising CDNAs that are differentially expressed in response to steroid treatment. Also included are the following: a high throughput method for using a cDNA to detect differential expression of mucleic acids in a sample; and a high throughput method of screening molecules or compounds to identify a throughput method of strandard defines a stage of that wilson disease and comparison of a strandard defines a stage of that disease. The high throughput method of screening molecules or compounds to identify a ligand that specifically binds a cDNA comprises: combining the combination with molecules or compounds under conditions to allow specific binding; and detecting specific binding between each cDNA and at least one molecule or compound. The molecules or compounds are regulatory proteins. The combination is useful for preparing a composition for treating liver disorders associated with steroid therapy, e.g., cirhosis or hepstitis. The present sequence represents a human cDNA which is differentially expressed in steroid-induced C3A liver cells. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format directly from USPTO
                                                                                                                                                                                                                                                                                                         2700
                                                                                                                                                                                                                                                                                                                                                                                        2948
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Combination useful for preparing a composition for treating liver disorders associated with steroid therapy, e.g., cirrhosis or hepatitis, comprises cDNAs that are differentially expressed in response to steroid

contensions trained by Comparable acceptors (GPCRs, AAY90643-AAY90677 and AAY90681-Y90687), and to DNA encoding them (AAA30709-A30743) and AAY90677 and AAY90683-Y90687), and to DNA encoding them (AAA30709-A30743). The mutant proteins of the invention contain a mutation in a portion of the protein comprising intracellular loop 3 (IC3) and transmembrane domain 6 (TWG). A non-endogenous amino acid, X, is substituted for an endogenous residue in IC3 at a postion 16 amino acids N-terminal of an endogenous proline in TWG to form a sequence X-C (AA)15-Pro. The endogenous amino acid is selected from Lys, His, Arg or Ala, and is preferably Lys. When the endogenous residue at this posticion is Lys, this residue is replaced by His, Arg or preferably Ala. The 15 amino acid stretch between the substituted amino acid and the Pro may be capagenous, non-endogenous, or a mixture of endogenous and non-endogenous cresidues. The constitutively active GPCRs are useful for identifying antagonists for a partial agonists for use as pharmaceutical agents. The mutant proteins are also useful in research settings for clucidating the roles of the receptors in normal and diseased conditions. Antagonists for a particular GPCR are used diseased conditions. Compounds without the need for endogenous ligands. Sequences AAA30799-CC Compounds without the need for endogenous ligands. Sequences AAA30799-CC CAAA30743 and AAA30773-rasory Prepresent DNAs encoding the mutant human CC GPCRs of the invention
                                                                                                                                                                                                                                                            invention relates to constitutively active, non-endogenous versions
                                                                              Non-endogenous constitutively activated human G protein-coupled receptors, useful for identifying agonists for use as pharmaceutical
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 2724 BP; 667 A; 723 C; 553 G; 781 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a method for treating a non-endogenous, constitutively active version of an endogenous human G protein-coupled receptor (GFCR) that has a transmembrane-6 (TM6) region and an intracellular-3 (IC3) region, by substituting a specific amino acid in the TM6 region with a different amino acid, and testing for constitutive cutivity. The method is useful for creating a constitutively active version of an endogenous human GPCR that comprises a transmembrane for region and an intracellular loop 3 region. The altered human GPCR polypeptides are useful for screening test compounds for identification of inverse agonists or partial agonists of GPCR polypeptides, which may have therapeutic uses. The altered GPCRs may also be used in vivo or in vitro in biological research. A nucleic acid encoding the altered GPCR may be used to create a transgenic animal expressing the altered GPCR remay be used to create a transgenic animal expressing the altered GPCR. The method allows screening for compounds that modulate the activity of a human G protein-coupled receptor without the need for provision of a ligand for the receptor. This is particularly useful in allowing currently known. This sequence represents cDNA encoding a human GPCR currently known. This sequence represents cDNA encoding a human GPCR

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1855                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1735
